

Interest free loans available for commercial pools

Up to £3,500 Energy Saving Grant available

THERMAPOOL™

The original pool insulation company

"We guarantee that customers with outdoor swimming pools insulated with Thermapool™ and using our clear solar pool cover will not need to heat their swimming pools on summer days when conditions are warm and sunny!"

Love your pool...

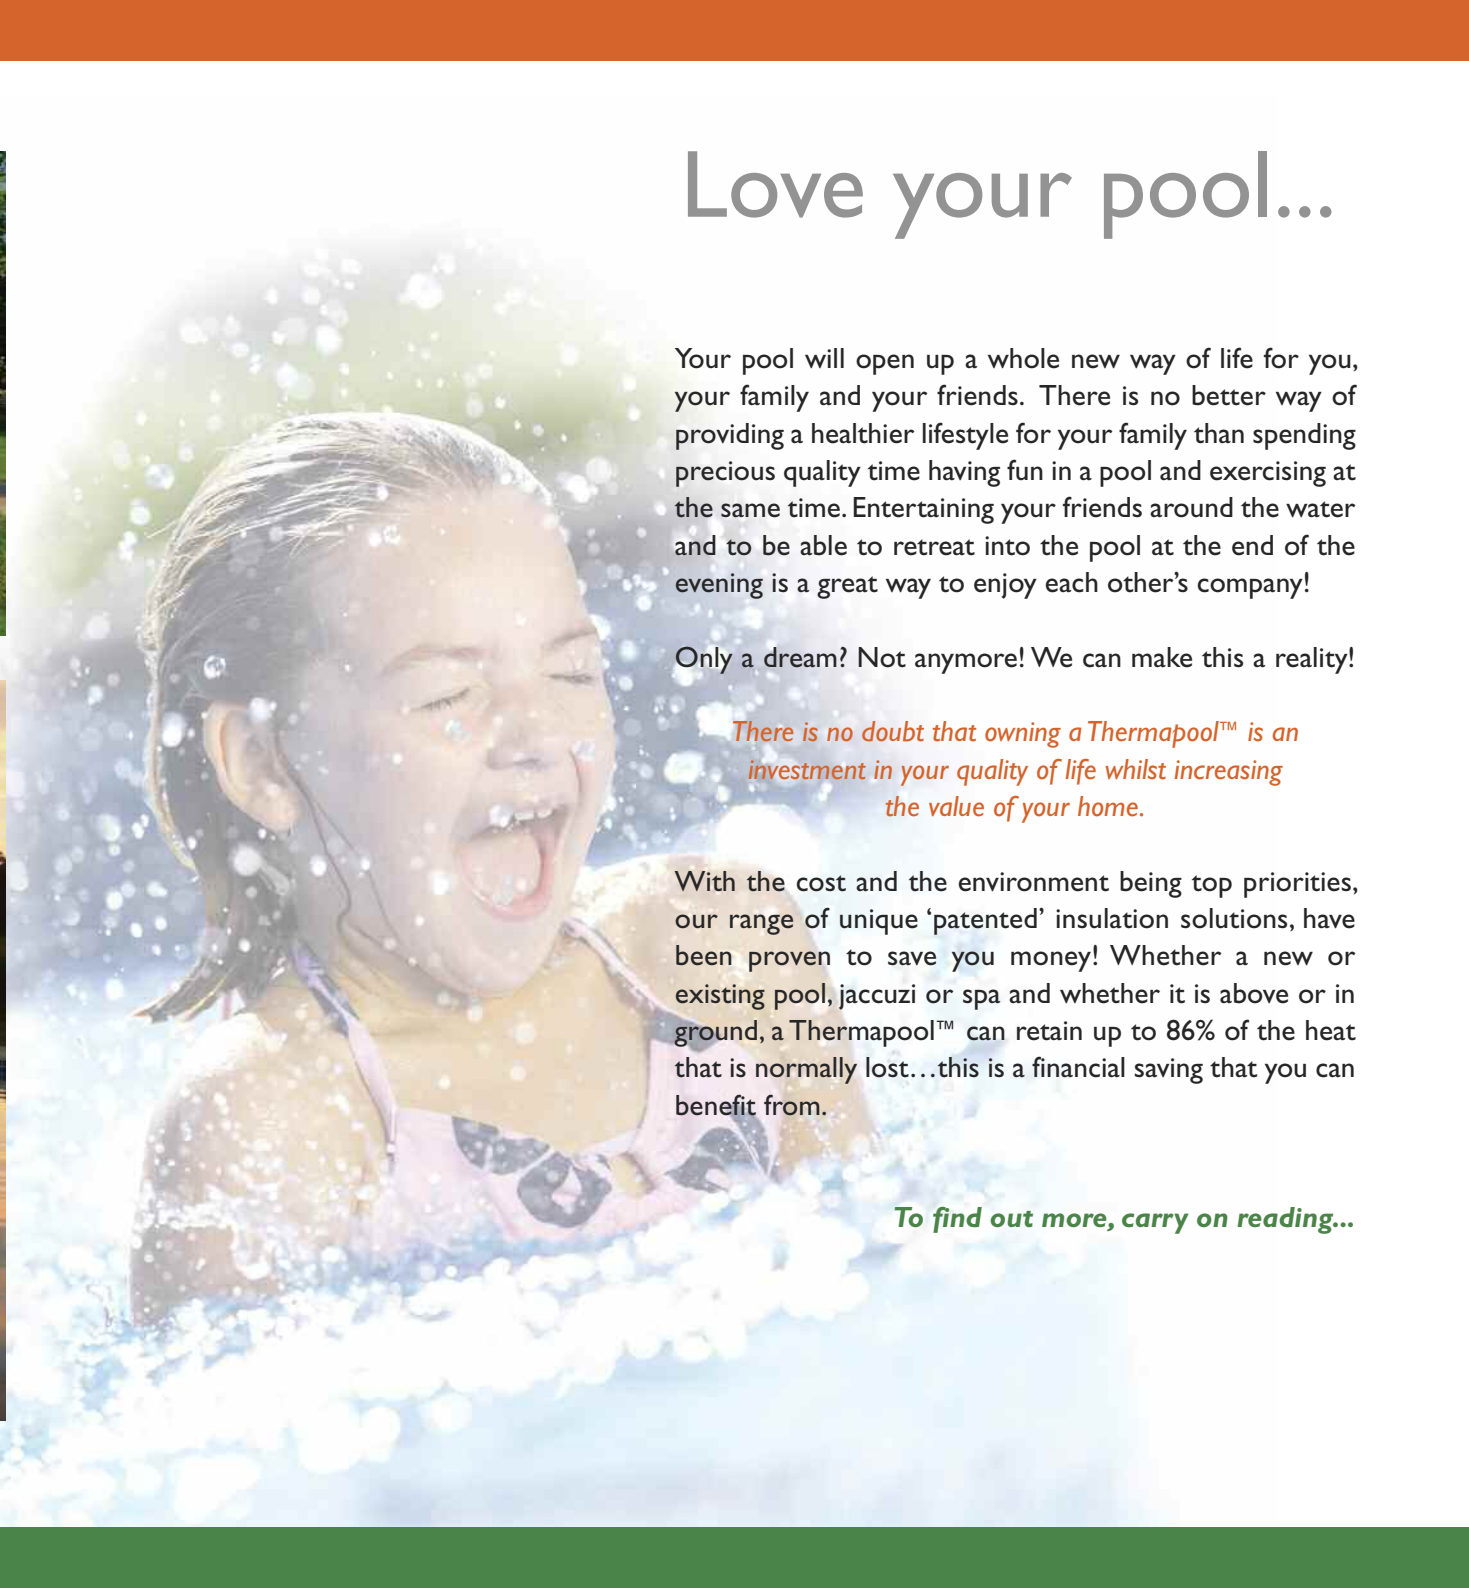

Your pool will open up a whole new way of life for you, your family and your friends. There is no better way of providing a healthier lifestyle for your family than spending precious quality time having fun in a pool and exercising at the same time. Entertaining your friends around the water and to be able to retreat into the pool at the end of the evening is a great way to enjoy each other's company!

Only a dream? Not anymore! We can make this a reality!

There is no doubt that owning a Thermanpool™ is an investment in your quality of life whilst increasing the value of your home.

With the cost and the environment being top priorities, our range of unique 'patented' insulation solutions, have been proven to save you money! Whether a new or existing pool, jacuzzi or spa and whether it is above or in ground, a Thermanpool™ can retain up to 86% of the heat that is normally lost...this is a financial saving that you can benefit from.

To find out more, carry on reading...

... love Thermapool™

Imagine getting a longer season to swim in your pool while saving half the cost you would expect to heat it? Now imagine receiving a grant to help you achieve this!

With Thermapool™ that's exactly what you can have!

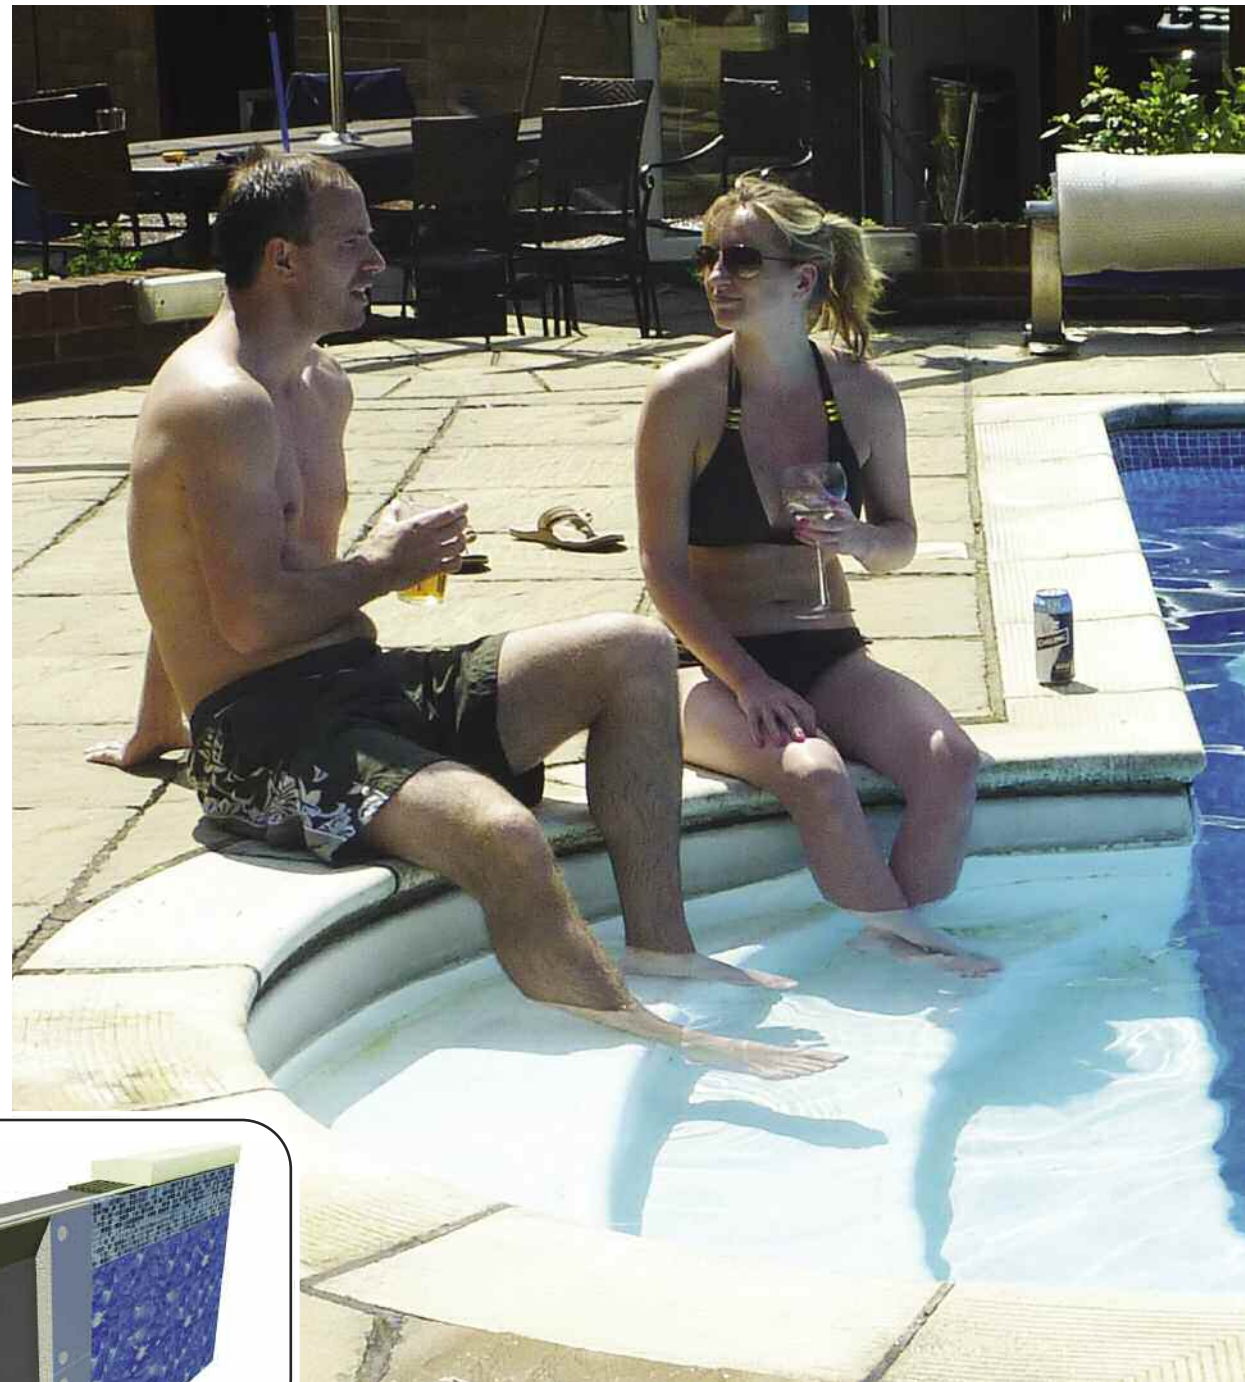

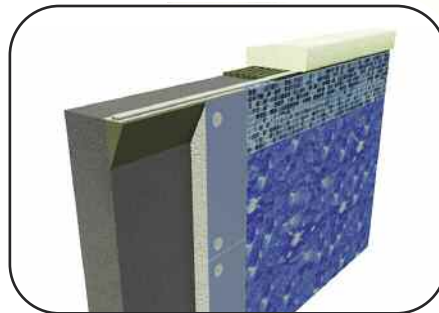

Accredited under DECC's Carbon Emissions Reduction Target, domestic swimming pool owners can receive an energy saving grant of up to £3,500 from Thermapool™, towards the cost of insulating their pool correctly and regardless of who is building the pool or your financial status. In some cases, the cost of a Thermapool™ can be completely free.

- Reduce your heating bill by more than half
- Heat your pool water – *not the surrounding soil*
- Reduce CO² emissions

Commercial swimming pools can claim interest free loans for Thermapool™ through the Carbon Trust.

If all swimming pools in the UK were insulated with Thermapool™ the energy saved would reduce CO² by 786,279 tonnes each year - the equivalent of a forest of 86 million trees. That's enough trees to cover Greater London!

Why buy **Thermapool™**?

Why buy from the original pool insulation company?

Before 2001, insulation in wet environments was not a concept well researched. Thermapool's invention that year was therefore a milestone in the swimming pool industry and there is a world of difference between our insulation products and any others available on the market.

Moisture absorption

Thermapool's continued research has proven that most other types of insulation quickly absorb moisture and lose their insulating efficiency in a swimming pool. This renders the insulation useless at preventing heat loss!

As amazing as it sounds – other insulation products have not been independently tested for use in swimming pools!

Greater thermal efficiency

Independently proven, our 75mm insulation system saves up to 86% of heat loss. Thermapool™ is installed on the inside of the pool so you're not heating the structure and to stop thermal bridging (where heat escapes into the ground and through the pool coping stones). Even if you do insulate your pool externally, Thermapool™ still outperforms any other insulations.

Compliance with the latest Building Regulations

All Thermapool™ products comply with the new UK Building Regulations which require the pool shell to be insulated to the same standard as a house wall.

Saving you money right away

If your builder does not use Thermapool™ and instead uses another insulation product which is not tested or accredited, you are missing out on up to £3,500 of grant money readily available to you.

We offer training and advice to ensure your pool builders apply Thermapool™ correctly and to ensure you can claim this 'energy saving' grant.

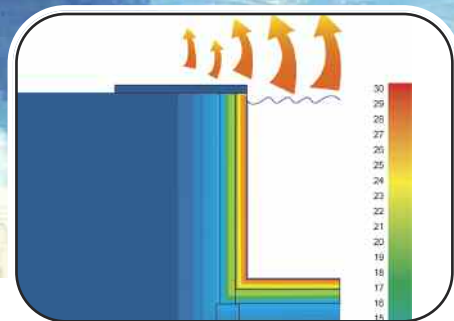

You can gain more savings through your energy bills as the cost of installing Thermapool™ can be recouped within the first year.

Savings keep on growing

Your Thermapool™ comes with a 25 year guarantee and has been proven to last more than 40 years.

We can calculate how much energy and carbon emissions you will save over the next ten years, saving you money year after year, so...

... why
buy
anything else?

Thermapool™ saves 86% of heat loss

... Swimming pool insulation any shape, any size, any type!

New Energy Efficient Indoor Liner Swimming Pool

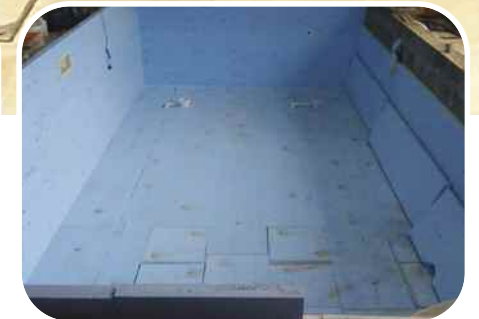

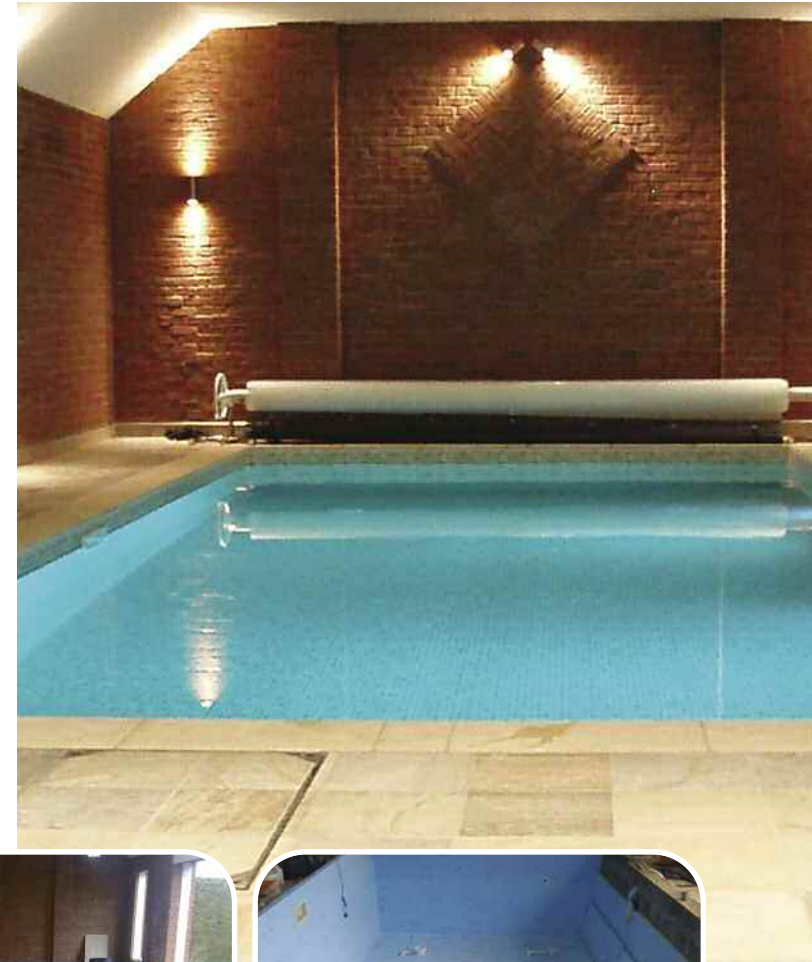

The owner of this new indoor liner swimming pool has a good understanding of the benefits of insulation and selected Thermapool™ as the best available swimming pool insulation product.

Thermapool™ worked closely with the pool builders from the very outset and provided them with training in how to prepare the swimming pool structure for application of Thermapool™ insulation to the shell. This meant pool fittings such as lights were permitted to protrude by 79mm.

The hollow block brick construction of the pool shell was an ideal flat surface for direct fixing of the insulation panels. As recommended in Thermapool's installation guide, a 4.5mm render was applied on top of the insulation panel on the walls and a 75mm screed was laid over the floor insulation ready for the mosaic PVC liner.

The client is delighted with the result and is managing to heat this 8m x 4m x 1.5m swimming pool with just a small electric heater.

"My wife and I are amazed at how little it is costing to heat our swimming pool and we now enjoy using it everyday."

Thermapool™ products

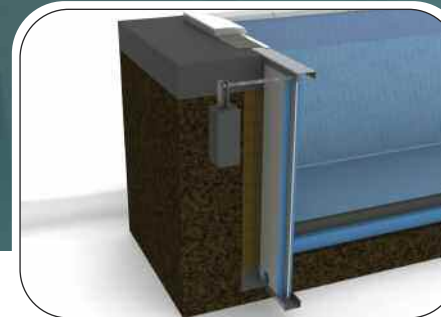

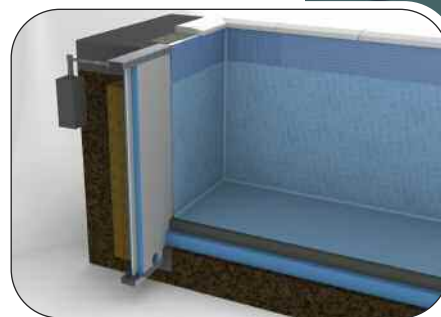

ThermaWall™ the Panel Pool Kit

ThermaWall™ is the all-in-one liner pool building kit which not only insulates, but cuts down on the building time it normally takes to create your swimming pool.

This design (*Patent Pending No. GB1015793.1*) uses 'Formula One' technology. The inter-locking insulated panels making up your swimming pool walls are designed to have strength and simplicity, making it a more desirable speedy method of construction. The floor of the swimming pool is insulated with Thermapool™ insulation boards and then screeded ready for your chosen pool liner.

ThermaWall™ will save on construction time, money on the excavation work and on the back fill materials required. Once filled your Thermapool™ will keep saving you money year after year.

Up to £3,500 Energy Saving Grants is also available on your new ThermaWall™ swimming pool.

Bonded insulation of a new tiled swimming pool

Your pool builder will construct a regulation, waterproofed swimming pool shell. Fittings should protrude by 86 to 90mm plus the tile thickness or installed after the insulation is fitted. Thermapool™ insulation is bonded to the shell. Apply our adhesive to both the wall and the insulation tile, applying pressure to ensure it is completely bedded. To the cleaned insulated surface, apply 8mm of Thermapool™ Insulation Render and Mesh. Once cured, apply your selected tiles using Thermapool™ Swimming Pool Tile Adhesive and Grout.

Insulating and renovating a tiled swimming pool

You can bond Thermapool™ swimming pool insulation directly onto existing sound tiles when you renovate your tiled swimming pool. Use our Thermapool™ wedge for just below the coping stones, to give you a taper from zero to 75mm thickness over the tile band. Use our circular insulation panels which are pre-manufactured to fit standard fittings such as drains, lights and skimmers. Our panels can be pre-grooved to ensure a perfect fit with your swimming pool radius corners and curves. Thermapool™ is bonded to the existing tiles. To the cleaned insulated surface, apply 8mm of Thermapool™ Insulation Render and Mesh. Once cured, apply your selected tiles using Thermapool™ Swimming Pool Tile Adhesive and Grout.

Thermapool™ products

Insulating a new liner swimming pool

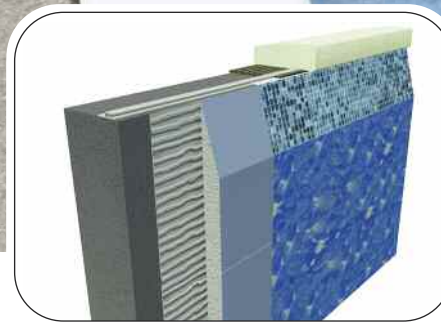

Permit the swimming pool fittings to protrude the structure by 79mm. Take the insulation above the water line and cap off with a concrete block turned 90° or cut a wedge out of the back of the insulation board and fill with concrete. We recommend that Thermapool™ be screw fixed (only bonded if the structure is not strong enough to support stainless steel fixings). Cover the fixing holes with Thermapool™ Insulation Render. The render and mesh can be applied for a 'hard' and uniform surface below the liner or go 'soft' by fitting the liner directly to the insulation. Fix the swimming pool liner into the liner lock, then fit the coping stones.

Insulating during a renovation or liner change

In a liner swimming pool renovation, Thermapool™ insulation is fitted without removing the existing swimming pool fittings or coping stones. Just remove the old liner. Use our wedge for just below the liner lock, giving you a taper from zero to 75mm thickness over the tile band. Use our circular insulation panels which are pre-manufactured to fit standard fittings such as drains, lights and skimmers. Our panels can be pre-grooved to ensure a perfect fit with the radius corners and curves. Insulation is bonded or fixed. Go 'soft' by fitting the liner directly to the insulation or go for a 'hard' rendered finish using Thermapool™ render before fitting the new liner.

Cover your swimming pool with ThermaCover™

The results of our swimming pool cover research are clear...and so is our ThermaCover™!

The unique research project conducted by Thermapool™ in 2008, in conjunction with Anglia Ruskin University, tested eight best-selling swimming pool covers. The conclusion was that any colour within the cover reduces its effectiveness to channel and trap solar energy, so a transparent cover is best. This will permit 100% of the light and energy to pass through and heat the pool water thoroughly and for free!

ThermaCover™ is laced with air bubbles which add insulation properties and protects your pool water from air and night time cooling. The 400 gauge material is hard wearing and can be manufactured to any shape or size.

"We guarantee that customers with outdoor swimming pools insulated with Thermapool™ and using our clear solar pool cover will not need to heat their swimming pools on summer days when conditions are warm and sunny!"
